

Netflix Movies & TV Shows Data Analysis (SQL Project)

- Performed end-to-end data analysis on Netflix's movies and TV shows dataset using SQL to extract actionable business insights.
- Utilized CTEs, window functions, and aggregate queries to analyze content by type, country, genre, and release year.
- Identified top 5 content-producing countries, most common ratings, and longest movies through optimized SQL queries.
- Conducted trend analysis and keyword-based content categorization to understand audience behavior and preferences.
- Demonstrated strong skills in data cleaning, query optimization, data visualization, and analytical problem-solving aligned with data analyst requirements.
